

WHAT IS CLAIMED IS:

1. An air guide device for a cooling tower, comprising:  
at least of air guide being coupled to a side surface of  
5 the cooling tower, and having a length corresponding to a  
width of the side surface,  
wherein the air guide includes:  
an air-inflow prevention wall having a curved cross  
section extending downwardly and outwardly, and adapted to  
10 prevent air discharged from the cooling tower from flowing  
back thereinto; and  
an air inlet portion being defined at a lower end of the  
air-inflow prevention wall and adapted to allow inflow of  
outside air into the cooling tower.
- 15 2. The device of claim 1 further comprising:  
an extension portion extending from the lower end of the  
air-inflow prevention wall toward the cooling tower.
- 20 3. The device of claim 1, wherein a plurality of air  
guides arranged in a vertical direction of the cooling tower.
4. The device of claim 3, wherein the air guide is  
reduced downward in width and height.
